

# g&p

PROTECTING INDUSTRY.  
ENSURING EXCELLENCE.

## An introduction to our services

[www.gpqm.com](http://www.gpqm.com)

**G&P is a world-leading quality management services provider, working with manufacturers across the automotive, aerospace, defence and industrial sectors, and their associated supply chains, to transform quality and efficiency levels and protect brand reputation.**

**Our services, solutions and capabilities are widely transferrable across numerous sectors, reflected in our global reach and strategic hubs in six countries. With over 30 years' experience delivering senior management support and deploying experienced personnel through our dedicated talent division, we deliver tailored solutions to overcome complex business challenges.**

Thanks to the use of cutting-edge technology, we're able to drive efficiency and innovation across the supply chain. This forward-thinking approach allows us to work in close partnership with our clients to enhance their operational resilience and deliver excellence at every stage.

Our philosophy is to provide solutions to manage, control and eliminate disruptions throughout the development, manufacturing, launch and after sales processes to support the drive to zero defects.

As the international leader in quality management, we appreciate the importance of speed, flexibility, confidentiality, and a tight-knit collaborative partnership with customers. Our deployable services, which can either be onboarded individually or as part of a package, include:

**ENGINEERING** | Page 4

**By harnessing our extensive experience**, expertise and capabilities, we provide quality management services in three key areas – supply chain, quality management systems and engineering, delivering risk mitigation solutions and supplier development.

**TECHNICAL** | Page 5

**Our expert technicians** provide hands-on support across manufacturing, rework and retrofit projects. Our bespoke approach enhances quality, reduces defects and ensures products meet the highest industry standards - helping businesses to maximise efficiency and performance.

**INSPECTION** | Page 6

**Our precise quality control processes** detect, contain and resolve defects before they impact wider production. Our inspection services ensure compliance, protect brand reputation, minimise disruption and protect supply chains with real-time reporting and data-driven insights.

**TALENT** | Page 7

**Our strength is in our people.** G&P Talent brings the knowledge and experience of G&P into an expert recruitment solution, connecting businesses with top talent, providing bespoke recruitment solutions for temporary, contract and permanent placements.

**By integrating processes, technologies, and data analysis together, we have created specialised models to drive faster improvement, deliver positive change and protect brand reputation.**

**These models include:**

Our award-winning Quality Excellence Model that is designed to drive intervention up the supply chain, eradicate root cause and remove disruption from our customers facilities.

With the ultimate goal of preventing quality issues, rather than simply controlling issues that have already happened, our Supply Chain Risk Management (SCRM) model delivers unmatched value. By proactively measuring and monitoring internal and external influences, we can identify and then tackle suppliers that pose a higher risk of disruption, with the aim to protect the customer from the cost of poor quality by enabling the drive towards zero defects reaching the production line.

# Engineering

**If you're experiencing challenges within your supply chain, or facing quality or delivery issues, we can help you to navigate the situation with confidence. We can deploy agile and scalable resources skilled in supply chain quality management, including Advanced Product Quality Planning (APQP) to achieve Production Part Approval Process (PPAP) and Supplier Quality Assurance (SQA) to resolve issues and improve process capability.**

Our qualified lead auditors can also assess your QMS against ISO, TS and AS standards, diagnose gaps against critical requirements and lead improvement programmes to enable your business to either achieve or retain certification.

Our services below support with new product introduction and supply chain performance improvement:

- Supply Chain Quality
- Quality Management System
- Engineering Quality
- Resident Engineers

# Technical

**When businesses are facing periods of high demand, or the pressure of special projects, we can deploy flexible and agile technical quality resources to help.**

We know that numerous stages in the assembly process require expert skills and knowledge to deliver a complex product or sub-assembly, while maintaining total control of quality. We can deploy experienced technicians to meet tight timelines and intricate skills profiles.

**The below range of specialist skilled technicians support with build assemblies, diagnosing and re-working products and conducting final product audits:**

- Skilled Technicians
- Product Engineering & Prototype
- Retrofit, Reflash & WIP Reduction
- Final Product Audit
- Batch & Hold
- Campaign Recall Action

# Inspection

**We deploy class-leading inspection services and set up supply chain firewalls to prevent out of specification components from reaching your final product production line, preventing disruption within your operations.**

Our programmes not only identify OK parts and quarantine NOK parts, but also rework the NOK parts, lead root cause analysis and fix implementation to resolve the initial causes of the quality concern. This can be implemented quickly in emergency situations, or as part of a longer-term managed service to control the quality of components coming into manufacturing operations or prototype build and prevent unnecessary disruption. Our services include:

- **Inspection Services**
- **Off-Site Finishing Processes**
- **Supply Chain Firewalls**
- **Deconstruction Services**

We can also inspect using AI supported vision inspection systems, and process parts through an inspection cycle without the need for consistent part placement and inspection environment conditions. Defects can be detected consistently and accurately in real world manufacturing environments with minimal time needed to set the process up. The system is of particular benefit where the impact of an NOK part being passed forward is too great to rely on human visual inspection. It can also speed up containment activities through the ability to check multiple components in a single scan.

Our inspection services are underpinned with QTrak, our proprietary project management system. This state-of-the-art tool is cloud-based and fully paperless, providing our customers with access to a wealth of real-time and historic data including inspection reports, supplier analysis and financial reporting.

By using API integration, QTrak connects with customers' in-house project management systems, allowing data to be shared securely between platforms to maximise efficiencies, streamline reporting and promote the highest levels of data integrity.

# Talent

**G&P Talent identifies top talent for both our businesses and clients. Our hands-on approach guarantees a trusted partnership, dedicated to maintaining the highest standards with care and integrity, whilst using advanced technology platforms, AI and data analytics to deliver quality candidates.**

Recognised for our superior customer service, professionalism, and confidentiality, our team of over 1,000 multi-skilled, multi-lingual professionals is at the heart of our success. Uniquely positioned in the market to leverage our knowledge, experience and DNA, we support with:

- Temporary/Contract Recruitment
- Permanent Placements
- Managed Service Programme (MSP)
- Recruitment Process Outsourcing (RPO)

***We are really impressed with G&P. Their input and knowledge are extremely useful. We have high confidence in their ability and their output.***

**Defence supplier.  
Engineering**

***Excellent service was delivered, as usual. From start to finish, all aspects of the containment were professionally addressed, and managed impeccably by one of G&P's business managers.***

**One of the largest manufacturers  
of components in the automotive sector.  
Technical**

***Our inspection request work with G&P involved large volume of engine blocks being processed to a very tight schedule. The whole G&P team involved in this operation, from supervisor level down to inspectors, performed this task under very stressful circumstances. Another fantastic job done by all involved.***

**Off-highway engine manufacturer.  
Inspection**

***Impeccable support provided by G&P, helping us to accelerate the pace of our new technologies.***

**Prestigious automotive manufacturer.  
Talent**
